

Physiology and Pharmacology Seminar Series, Autumn 2008-2009

For further information about this programme of events contact,

- Gillian Edwards, Email: mqbsszge@manchester.ac.uk, Tel: 0161 275 5488

Tuesday, 16 September 2008

- New targets and therapies for modulating chronic inflammatory and neuropathic pain
Dr Mike Jarvis, Abbott Pharmaceuticals, Chicago, USA

Monday, 29 September 2008

- Novel approaches for the treatment of Parkinson's Disease
Professor Bastian Hengerer, Boehringer-Ingelheim, Germany

Monday, 06 October 2008

- Cellular and molecular basis for physiological angiogenesis
Dr Stuart Eggington, University of Birmingham

Monday, 13 October 2008

- Determinants of anion-proton exchange in CLC transporters
Dr Anselm Zdebik, University College London

Monday, 20 October 2008

- Calcium channel $\alpha_2\delta$ subunits, mechanism of action and target site for drugs
Professor Annette Dolphin, University College London

Monday, 10 November 2008

- RNA processing and the biogenesis of glutamate receptors
Dr Ingo Greger, University of Cambridge

Monday, 17 November 2008

- Single channel properties of the cardiac ryanodine receptor
Professor Alan Williams, University of Cardiff

Monday, 24 November 2008

- Unravelling the mysteries of intestinal amino acid transport
Professor David Thwaites, University of Newcastle

Monday, 01 December 2008

- Colonic K⁺ channels in health and disease
Dr Malcolm Hunter, University of Leeds

Monday, 08 December 2008

- Kir6.2 mutations, neonatal diabetes and the heart
Dr Paolo Tammaro, University of Manchester

Monday, 27 April 2009

- The assembly and trafficking of immune cell P2X purinergic receptors
Dr Ruth Murrell-Lagnado, University of Cambridge

Monday, 18 May 2009

- Calcium-sensing, exocytosis and calcium channels in beta cells
Professor Patrik Rorsman, University of Oxford
