

# Tissue Systems Seminar Series 2011

Michael Smith Lecture Theatre, Thursdays 12:00

Organised by Enrique Amaya and Charles Streuli

- 13<sup>th</sup> January**      **Peter Holland** – University of Oxford  
Homeobox genes, genomes and animal evolution
- 3<sup>rd</sup> February**      **Mike Dixon** – University of Manchester  
Molecular genetic analysis of Van der Woude syndrome
- 10<sup>th</sup> February**      **Kurt Anderson** – The Beatson Institute for Cancer Research  
Imaging the molecular dynamics of metastasis
- 17<sup>th</sup> February**      **Kate Nobes** – University of Bristol  
Contact inhibition of locomotion and tumour cell invasion
- 3<sup>rd</sup> March**      **Roy Zent** – Vanderbilt Medical Center  
How do integrins regulate polarized epithelial cells?
- 10<sup>th</sup> March**      **Berenika Plusa** – University of Manchester  
Cell fate choices and embryo microenvironment
- 17<sup>th</sup> March**      **Anna Akhmanova** – Erasmus Medical Center  
Friends at the ends: a dynamic protein network controls the fate of microtubule tips
- 31<sup>st</sup> March**      **Will Wood** – University of Bath  
Macrophage migration and chemotaxis in the *Drosophila* embryo
- 7<sup>th</sup> April**      **Steve Wilson** – University College London  
Breaking symmetry in the brain: from genes to circuits
- 14<sup>th</sup> April**      **Paul Lu** – University of Manchester  
Role of the stromal microenvironment in normal development and tumorigenesis of the breast
